PROFILE

Graduated from the prestigious NSA scholarship program at UC-LM, I was blessed to have experienced the wonders of engineering with the best proximity at an early age. The Cadet-ship program supported us in ways where we were molded to be one of the finest produce of the next on-board officers. With almost 4 years experience as an Engine Room support crew and engineering trainee and the drive and set of skills that I can offer, I look to practice my OIC of an Engineering Watch license on my next contracts.

My interests today lie greatly in the Internet of things and how I can bridge it with the shipping industry. On my vacation, I do free-lance full-stack web development. I started to market my skills last November of 2016. I develop web-apps using Ruby on Rails. I practiced my development skills in cloud9.io, a cloud-based IDE now as I mature as a developer, it took light on me that personalization is awesome so I transitioned in developing at my local machine. Some of the Websites I have created. cebupropertiesinternational.com projectkalipay.com litdigitalsolutions.com Front-end Skills: HTML/HTML5 CSS/CSS3 BOOTSTRAP JAVASCRIPT JQUERY Server-side: PHP SQL MySQL RUBY AJAX POSTGRESQL Framework: Ruby on Rails Technologies I frequently use. HEROKU GITHUB BITBUCKET Google Developers Console etc.
