📍 Personal Summary

My interests lie greatly in the Internet of things and how I may bridge it with the agricultural industry. And though I am a Marine Engineer by profession and training, the idea of working a career or building a business in Tech has always been on my mind. Last November 2016, I started my freelance journey. Took online courses and developed small web-apps using Ruby on Rails and have practiced my development skills in cloud9.io, a cloud-based IDE. Now as I mature as a developer, it took light on me that personalization is awesome so I transitioned in developing at my local machine.

The opportunity to work at something and giving your best whilst enjoying what you do is what I see myself experiencing on the tech industry.
